### Building Capacity

Stronger Communities

The new wellness equipment has provided teachers with a way to relax on difficult days, students with a new place to learn, and the nurse with improved equipment to care for students.

### Environmental Changes

Has created physical and observable change by adding the new chair and new tables to the school environment.

## Impacts of New Equipment

With this project, Athens Elementary has created a new way for teachers to relax. This has contributed to the positive morale on campus. In addition to providing students with a new place to learn, the picnic tables have also been utilized during a school dance to feed the staff and students. The tables were also put together by a Boy Scout which helped him work towards Eagle Scout status. Athens has also made the school nurse's job easier by giving them a kit that can be utilized around campus.
